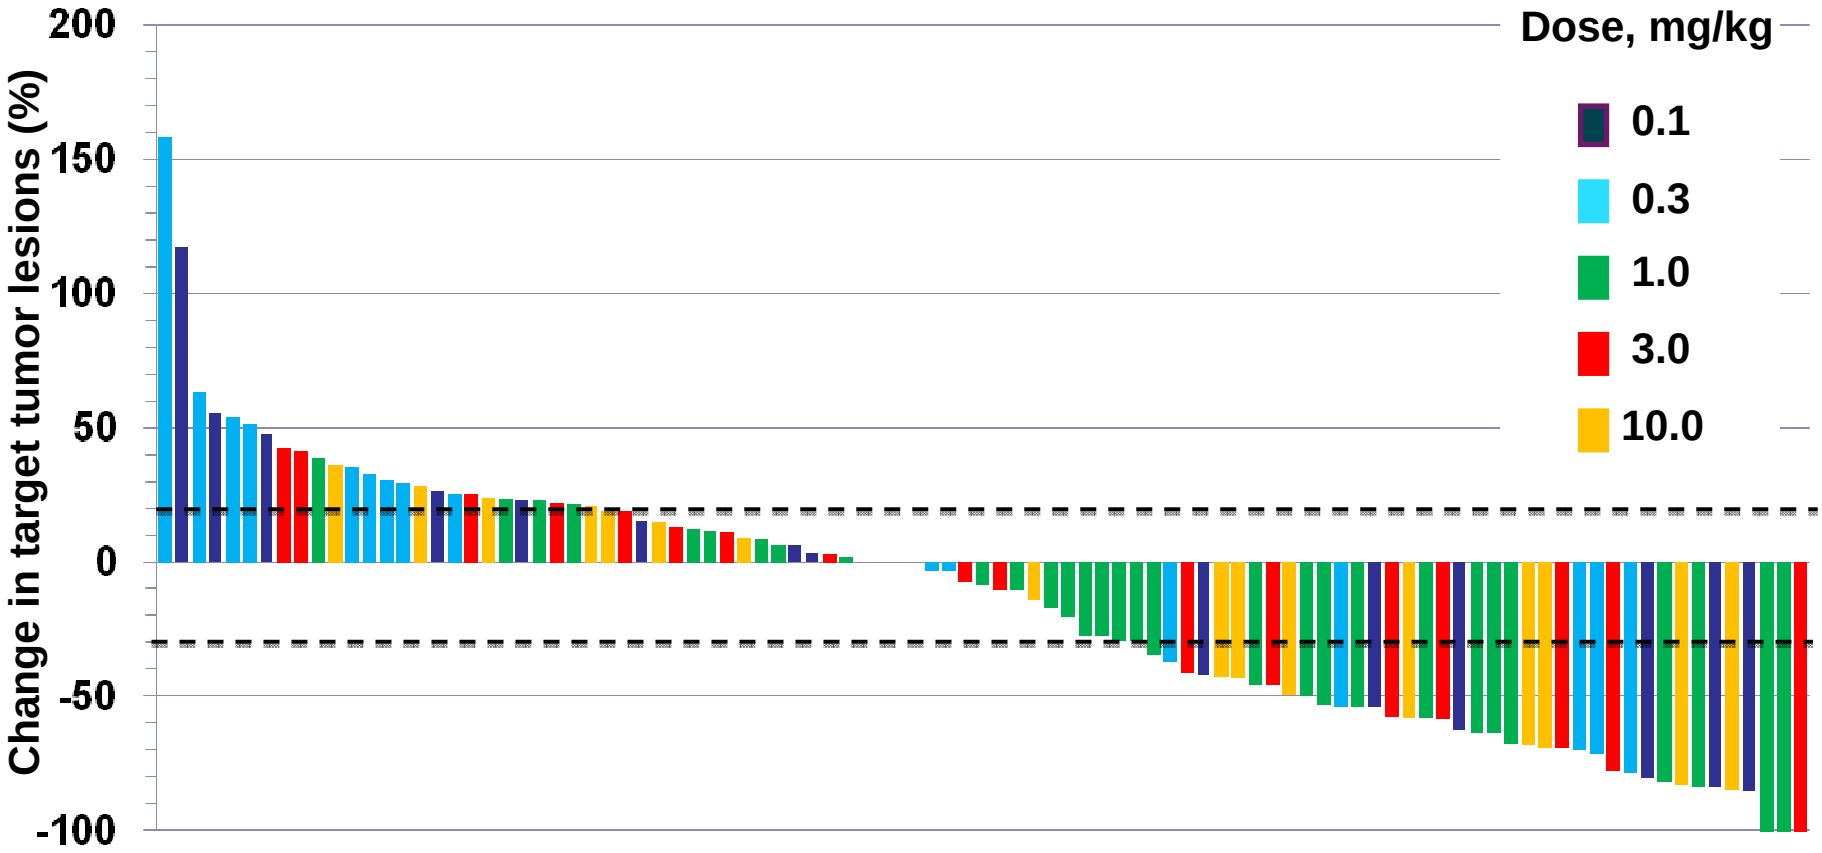
Nivolumab single agent therapy: Best Change In Target Lesions to First RECIST Progression

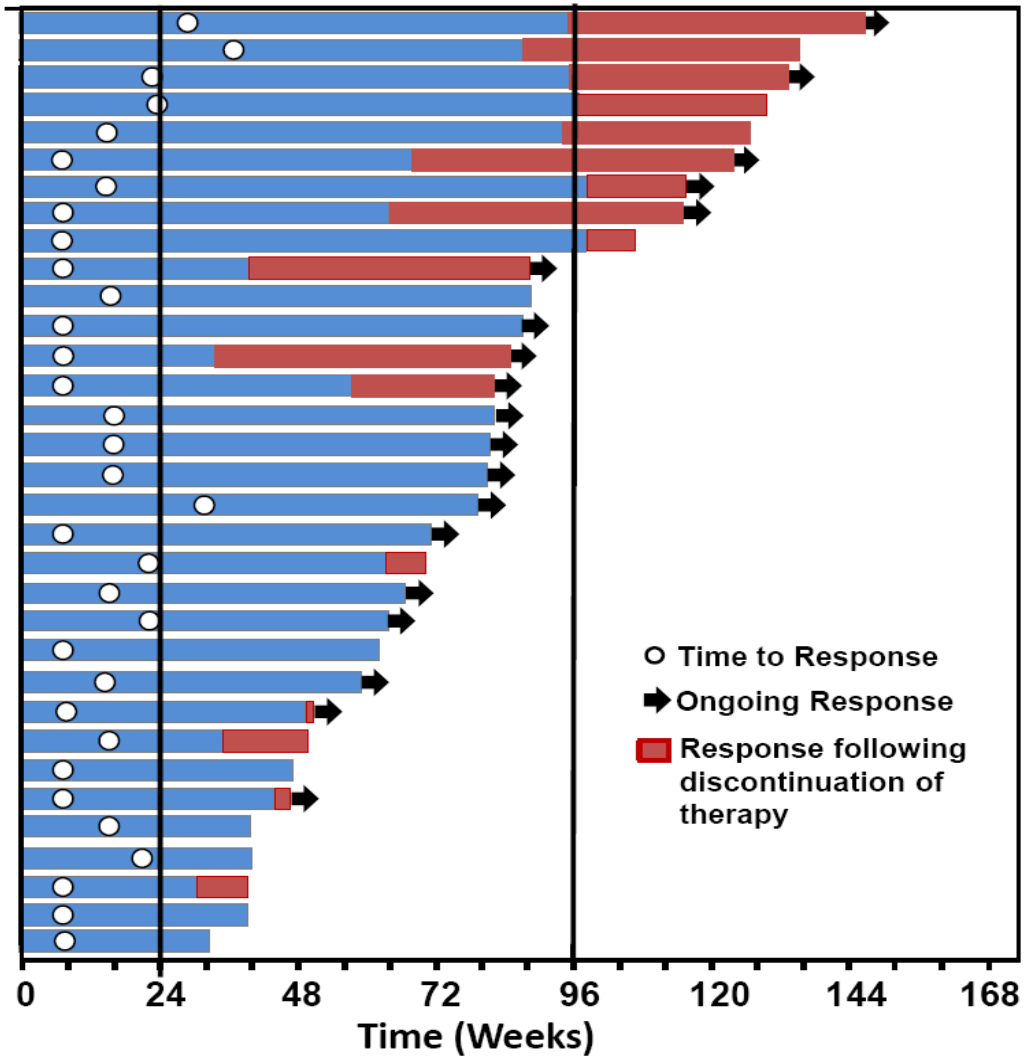


* Nonconventional responders

Horizontal line at −30% = threshold for defining objective response (partial tumor regression) in absence of new lesions or non-target disease according to RECIST. Horizontal line at +20% indicates the threshold for determination of progressive disease according to RECIST.

Sznol *et al*. ASCO 2013

Response Characteristics in Patients with Melanoma Receiving Nivolumab



- For 17 responding patients who discontinued therapy for reasons other than disease progression, 71% (12/17) responded for ≥16 weeks since end of therapy
- 67% (8/12) remained in response from 16-56 weeks at time of data analysis

Presented by M. Sznol, ASCO 2013

Progression-free Survival for Patients with Melanoma Treated with Nivolumab

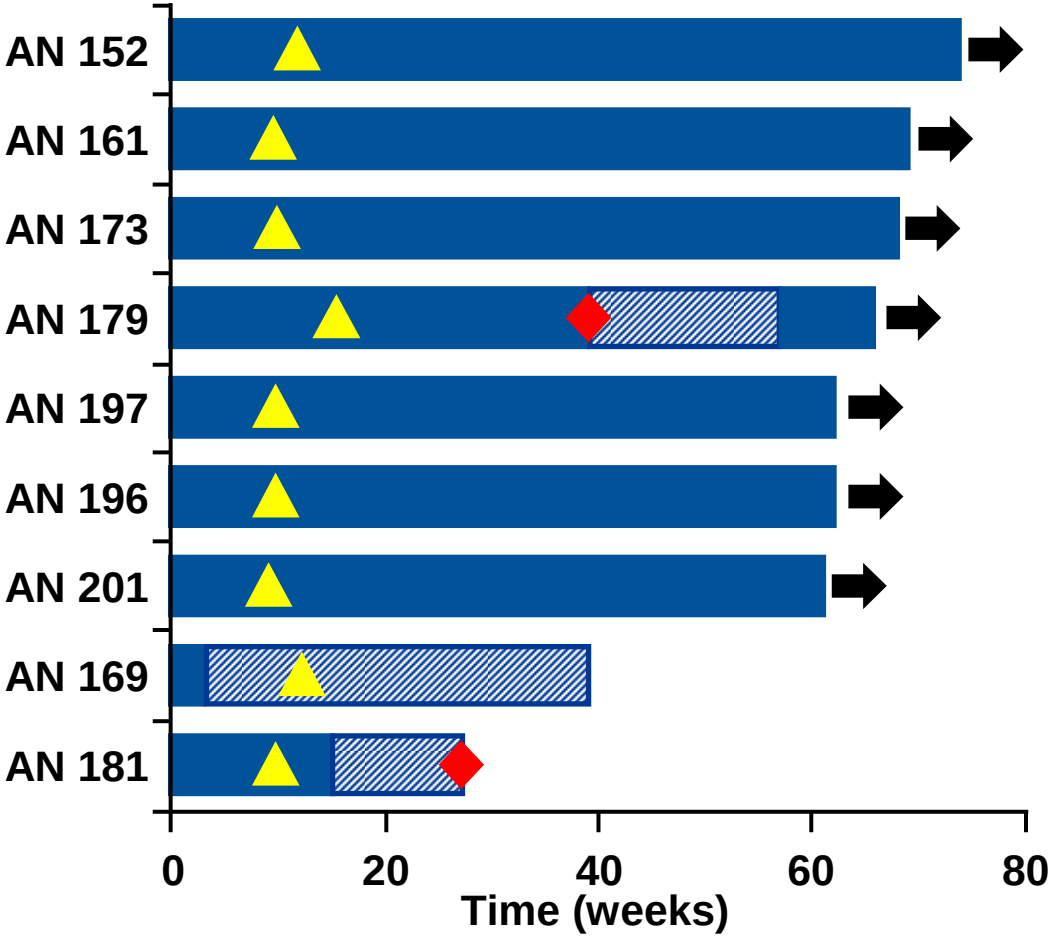
Patients with measurable disease on baseline imaging and an evaluable tumor specimen for PD-L1							
Score ≥ potential cut point	9	6 (67%) [30%, 93%]	—	7	4 (57%) [18%, 90%]	—	—
Score < potential cut point	24	1 (4%) [0%, 21%]	—	22	2 (9%) [1%, 29%]	—	—

*Response rate per RECIST v1.1 is based on those patients who had ≥1 measurable lesion at baseline per central review. All responses were confirmed except for 2. One patient withdrew consent for treatment, unrelated to toxicity, after the first imaging assessment, and 1 patient had a confirmatory scan of PR at day 27.

MK-3475 Responders Have Prolonged Duration of Response



- 7/9 responders on treatment at time of analysis
- Median PFS of responders not reached at 62 weeks
- AN 179: stopped MK for local therapy to brain metastasis; MK resumed based on continued systemic response
- AN 169: after 1 dose, MK stopped for unrelated grade 4 hypercalcemia; response maintained without further treatment; per protocol, follow-up ceased at 39 weeks

Paul Tumeh, MD

A. Ribas, ASCO 2013

Conclusions

- PD-1/PD-L1 blocking immunotherapy agents are the most promising new agents in clinical development for the treatment of cancer
- PD-1 blockade works by:
  - Expanding an intratumoral infiltrate by effector T cells
- The full potential of PD-1/PD-L1 blocking antibodies is only starting to be realized:
  - Range of indications
  - Improved patient selection
  - Combination therapies
